## Step 1. Generate new address

Choose your currency and click on the "Generate new address" button.

Step 2. Print the Paper Wallet

Click the Paper Wallet tab and print the page on high quality setting. **Never save the page as a PDF file to print it later since a file is more likely to be hacked than a piece of paper.**

Step 3. Fold the Paper Wallet

Fold your new Paper wallet following the lines.

You can insert one side inside the other to lock the wallet.

Step 4. Share your public address

Use your public address to receive money from other crypto-currency users. You can share your public address as much as you want.

Step 5. Keep your private key secret

The private key is literally the keys to your coins, if someone was to obtain it, they could withdraw the funds currently in the wallet, and any funds that might be deposited in that wallet.

Please test spending a small amount before receiving any large payments.

Consider supporting us

This service is free and will stay free, without advertising or tracking of any sort. Please consider making a donation to support us and the people that add support for new currencies.

Frequently asked questions :

- **Is it safe ?**

- **Why should I use a paper wallet ?**

- **How to use a paper wallet ?**

- **How to spend the coins stored in a paper wallet ?**

Security Checklist :

- Your browser is capable of generating cryptographically random keys using window.crypto.getRandomValues

- Are you using a secure operating system guaranteed to be free of spyware and viruses, for example, an Ubuntu LiveCD?
